

GCI POWER TOOLS SUITE FOR OPENTEXT CONTENT SERVER

Designed to help organizations better manage their information and content lifecycles, GCI Power Tools provides business critical extensions to the OpenText Content Server platform.

Organizations in industries such as Life Sciences, Energy, and Finance use GCI Power Tools to help them automate document creation, deliver regulated document workflows and reports, and migrate and archive content in a robust and scalable manner.

GCI POWERTOOLS DEPLOYMENTS

GCI Power Tools for Deployments provides the most complete solution for moving content including users and groups, documents, folder taxonomies, workflow maps, categories and attributes, and more, among your Content Server instances. The proven choice for organizations around the world.

GCI POWERTOOLS WORKFLOW

Unleash the full potential of Content Server Workflow with this comprehensive set of extensions. GCI Power Tools for Workflow allows your map designers to create fully customized forms on a step by step basis and better manipulate and manage data within the Content Server workflow.

GCI POWERTOOLS DOCUMENTS

Give your users the power to create their own document processes within Content Server with a set of simple, yet powerful, configuration tools. GCI Power Tools for Documents provides metadata integration, merging of documents, conversion to PDF or Word, watermarking, and digital signatures.

GCI POWERTOOLS ELECTRONIC SIGNATURES

Align your existing OpenText Electronic Signatures implementation more closely to your existing business processes with extensions such as multi-document signing, enhanced watermarking, and custom signing pages.

GCI POWERTOOLS
REPORTS & VIEWS

Develop and present detailed management dashboards and business reports from diverse data sources and meta-information stored within your Content Server repository, with no need to learn a proprietary language.

GCI POWERTOOLS
DASHBOARD

Create control panels providing centralized access to information spread across Content Server documents, metadata, and more. Collect, visualize, and interact with information from other repositories like SharePoint or Documentum directly within Content Server.

GCI POWERTOOLS
VIEWER

Do your users need to view, redact, and annotate Office or CAD formatted documents directly from within your OpenText Content Server's web interface? GCI Power Tools Viewer helps leading organizations provide simple and effective document viewing and mark-up solutions to their end-users.

GCI POWERTOOLS
INFINOTE

GCI Power Tools for Infinote brings the power of Infinote into your OpenText Content Server environment. With Infinote, your organization can analyze, update, and audit content such as contracts, derivatives, policies, drug dossiers, procedures, and much more.

GCI POWERTOOLS
CONTENT EXPORT

Extract and pre-process defined collections of documents and metadata from Content Server for distribution to clients, regulators, and other stakeholders.

GCI POWERTOOLS
ARCHIVING

Eliminate legal liabilities and improve the performance of your Content Server by properly archiving complex content such as completed workflows and audit information.
